

Great performance. Uncompromising quality.

Engineering Service

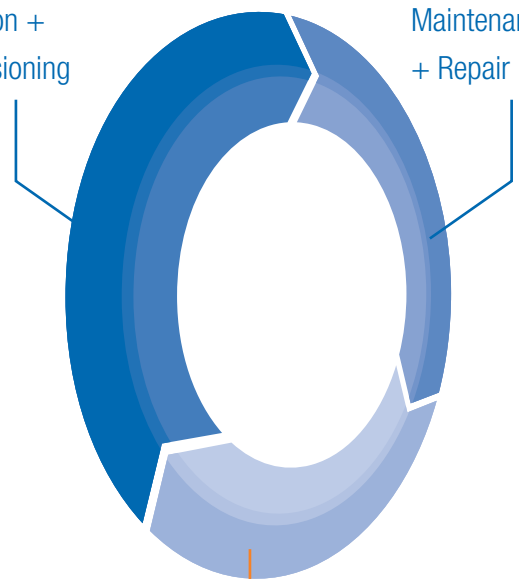

Your success in business is heavily dependent on whether your machines and systems are working reliably and economically. It is impossible however, for any machine to remain at the cutting edge of technology; at some time it will near the end of its life cycle. This can lead to lost output and put you at a competitive disadvantage. There is no better time to use the YASKAWA Engineering Service!

Our experienced engineers and technicians are well trained, highly qualified and professional. We have the necessary breadth of expertise to explain the potential use and versatility of our products. We will modernise or replace old systems which are no longer feasible for technical or economic reasons. In doing so, we do not seek to apply “off-the-peg” solutions but take into account the specific needs of your operational environment. We only ever undertake modernisation work with a view to optimising processes. This we achieve by enhancing the output and performance of your systems and increasing the availability of your facilities. YASKAWA Engineering will design and make switch-gear and controls to individual customer specifications. For example, we configure interfaces to enable continued use of existing cabling and to minimise disruption on changeover.

Installation +
Commissioning

Maintenance
+ Repair

Optimisation +
Modernisation

Our service – your benefit

- We conduct a review to identify weak points in the production process
- We offer one-stop modernisation solutions, from the planning and design phase right through to retrofitting, commissioning and training
- Unscheduled downtimes and periods of outage can be avoided
- We supply customised solutions to meet individual requirements
- New technologies can expand the functionality of your plant
- We also take care of switch cabinet design and fitting, start of operation and training
- Production downtimes are minimised and maintenance costs reduced
- We enable you to make better use of or improve your plant capacity
- You reap the benefit of greater operational reliability

And this is how it works

1. Contact our Support department.
2. We analyse what added factors would enhance the cost-effectiveness of your machinery and optimise your engineering systems.
3. Hardware and software generally need updating – we suggest modernisation measures which would be advisable in your specific case.
4. We also analyse your plant for inherent weaknesses which might affect output in the near future and advise you accordingly.
5. We will replace your machinery or deploy practical plug & play solutions to exchange individual parts to keep outage times short.

YASKAWA Engineering specialises in providing a service in respect of the products supplied by YASKAWA Electric and industrial machinery and plants supplied by other manufacturers. The globally available service spans the entire product life cycle, thus guaranteeing the operability of your machinery and facilities. YASKAWA Engineering invests a combination of great flexibility and outstanding quality in its individualised customer service.
