Beyond your horizons

YASKAWA Engineering Europe GmbH provides customised services and support for machines that are at the heart of automation in a number of industries.

Our organisation traces its roots to Japan-based YASKAWA Electric – one of the world's leading manufacturers of servo motors and drives, inverters, machine controllers, and robots.

We specialise in customised services and support for YASKAWA Electric products, but also for industry machinery and systems of other manufacturers. Across the entire product life cycle.

Our company has a wealth of experience in this field, and is part of a global service network.

Quality is what we are about.

A strong team

The workforce at YASKAWA Engineering Europe is both dedicated and highly skilled. We employ technicians, engineers and service specialists with extensive expertise in their respective areas. They work for a company that is unique and that looks after its staff well.

We make the compatibility of work and family affordable to our employees. In fact, YASKAWA has been certified by a leading foundation (berufundfamilie®) for its family-friendly HR policies.

This approach is reflected in an above average length of service of our staff. We cultivate sound values and positive joint interactions.

This makes us strong and our employees relay this strength to you.

Reliable support for your business

We define ourselves by our customers' wishes and needs.

YASKAWA Engineering Europe offers security to your business by performing high-quality maintenance, including immediate and preventative measures.

We keep you operational for your customers.

Our size is your advantage: short reaction times, direct communications and an extensive knowledge base enable us to solve just about any individual challenge flexibly and on short notice.

Onwards and upwards

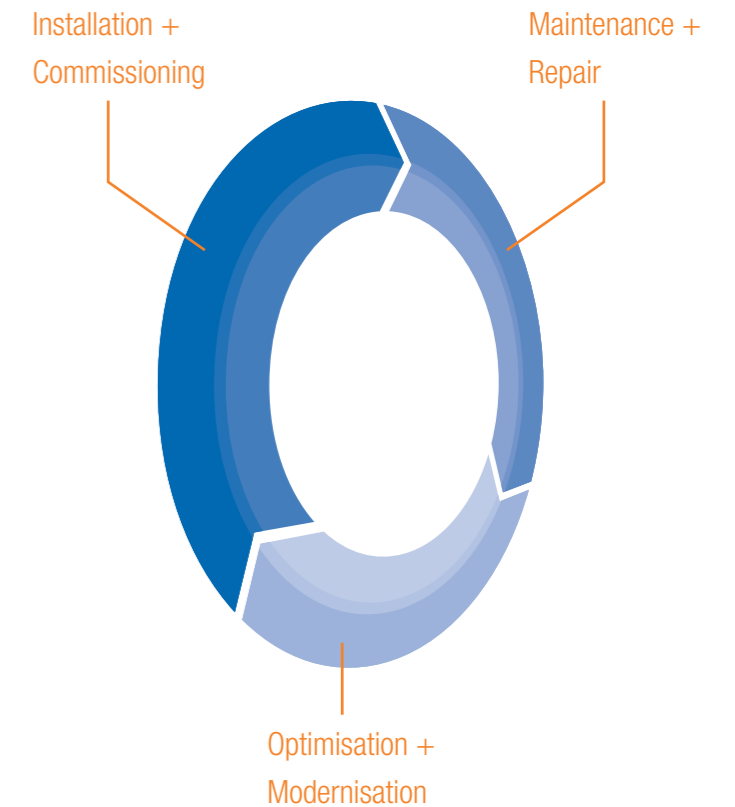

YASKAWA Engineering Europe is the ideal partner for the entire life cycle of your machinery.

We develop a made-to-measure solution for your company, perform installations, assemblies and accompany its commissioning.

Downtime is not an option. No machine can run non-stop forever. We provide preventative maintenance to keep your systems up and running. If they do stop, we do repairs, speedily and reliably.

Even the latest technology will become outdated. We can optimise and upgrade your machinery together with its entire surrounding network.

At the end of a life cycle, we are present too and arrange the new beginning. We can replace individual parts or entire machines.

A unique combination

The success of your enterprise starts with tailored solutions for your machinery and equipment. Aligned with your company's strategic goals.

To produce exceptional products you require exceptional tools. Up and running at all times. Our experts ensure this through our unique range of services.

Face any **challenge** in an optimal way

Engineering

We develop concepts. Optimise processes.
Provide our technical expertise to you.

Installation and commissioning

We're involved from the word go.

Technical support

Call us and we take care of it – via telephone or on-site
if needed. Quickly and efficiently.

Global support

Beyond any boundaries, we support customers locally.

Preventative attendance and maintenance

We keep downtime to an absolute minimum.

Service contracts

No worries allround. For our complete support service
package we draw on the resources and knowledge
available within the worldwide YASKAWA organisation.

Training

For product knowledge and maintenance.

Repairs

No patchwork, but all new. On location or in-house.

Spare parts

We keep extensive stock for your needs.

Milestone accomplished

We have accomplished our goal when you are successful.

YASKAWA Engineering Europe is a company that lives quality. Our services are geared to supporting our customers, enabling them to operate cost-effectively and achieve the best results for their own customers.

Our customers are at home in many industries.

We serve companies from trades such as mining, steel, cement, pulp and paper, chemical, automotive, packaging, food, machine tool, semiconductor, wood, and textiles.

We are continually expanding our network.

We already offer local services and support for customers in Germany, the UK, Italy, France, Russia, Spain, South Africa, the Czech Republic and Turkey.
